Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a photosensitive composition, classified in class 430, subclass 281.1.
 - II. Claims 10-19, drawn to a waveguide device, classified in class 385, subclass 143.
 - III. Claims 20-22, drawn to a method of preparing a waveguide device, classified in Class 430, subclass 321.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the waveguide device could be made by an extrusion process.
3. Inventions I and III are related as product (composition of matter) and process of use (of composition of matter). The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case Invention I may be used in a photographic process.
4. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

Art Unit: 2877

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). However, the inventions are two separate statutory classes: item of manufacture (Invention II) and composition of matter (Invention I). Therefore, one way distinction is appropriate. Therefore, the subcombination has separate utility in photography, holography, and in a polarizing apparatus.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
